| <b>Subject:</b>     | Updates? Repo?  |                  |        |
| <b>Description:</b> | <p>Hey guys,</p> <p>Love your work, just wondering if we can expect an updated release any time soon? Current version is for 4.51 and WHMCS 5.1.2 - the latest versions of those are coming up on 4.59 and WHMCS 5.2.6 and there's a wealth of work that had to be needed even months ago when we installed the 1.0 I think it was in March, had to go through all the bugs and issues and apply a bunch of patches to get stuff working, is there anywhere we can find the latest version of the integration which includes the ton of patches done? Do you have it on a repo somewhere so we could pull updates easier vs compiling manually? We're about to upgrade from 4.53 to the latest and are going to have to do all the patches ALL over again since the files will be overwritten and not looking forward to that + all the new ones that have been posted in the past months. Any suggestions? Don't take it the wrong way, I love your guys' work and it is amazing, much better than others, I just wish could get access to the full/latest ver easier instead of dealing with patches :) You guys should pull some more help from the Kayako team or even the WHMCS team to help get things moving along very quickly! Anyways again, awesome work you guys and thanks for it!</p> |                  |        |

Also - what happened to the SWIFT\_Modifications.doc ?????? It's no longer in the wiki, what's up with that, where'd it go? Do we no longer need it? Hope to hear from you guys soon, thanks,

Ignore the SWIFT\_MODS question, I see that was merged into the kayako branch and live now so right on. Got everything upgraded and working great, a few bugs which opened into a bug report and hope to hear from that soon but beyond thank awesome work, thanks guys as usual.
