SugarCRM - Bug # 334: Synchronization and Load Balancing

Status:	New	Priority:	Normal
Author:	Gurpreet Singh	Category:	
Created:	26 Nov 2013	Assignee:	
Updated:	05 Dec 2013	Due date:	
Subject:	Synchronization and Load Balancing		
Description:	User sync increases the load on the server resources. As of now we are trying to fetch all the user records (SugarCRMUserListing & SugarCRMAccountListing) which results in the script being time out and hangs the resources at hand which further increases the load on the server. We need to try to sync the user details per users at a time rather than trying to sync all users in a single go.
