Subject:	After trying to re-install Kayako Fusion I get a Notice		
Description:	I had to re-install Kayako Fusion on my computer, I have your custom tweaks on it, but when I ran setup I got this: Notice Undefined variable: _TemplateIDtoAlter (D:/Apache24/htdocs/kayako/__apps/customtweaks/config/class.SWIFT_SetupDatabase_customtweaks.php: 153) ===

Hi there,

CT should be uninstalled prior to upgrading Kayako. and then reinstalled after. CT is version dependant, so you always need to reinstall it if using a newer version of Kayako.

Gary
