Subject:	Getting Database Error when Authorizing the Account
Description:	Hi,

Your Tweetboard project is absolutely an awesome idea, I have successfully installed the application in our Help Desk and when I am trying to Authorize our Twitter account with twetboard, it is going Twiiter and authorizing the credentials, but when returning back to Help Desk it is throwing an error...

[4096]: Object of class stdClass could not be converted to string (Database/class.SWIFT_Database.php:640)

By this error the page goes blank, after that when i refresh the page it is giving me the below errors..

[Notice]: Undefined index: oauth_token (twitteroauth/twitteroauth.php:118)
[Notice]: Undefined index: oauth_token_secret (twitteroauth/twitteroauth.php:118)

Please let me know if you need anymore information from me..
I am very happy if you could help me out.. Thanks friend..
